CORNERS are available in all colors and styles of stone.

Natural stone has been tooled to create the looks in our pictures. Manipulation of natural stone is required for most installations.

Natural stone will vary in color, shading, veining and texture from one piece to another. Colored literature is a sample/example only. Photos are used for general acceptance of stone and not to be used for color matching.

Stone has been used for thousands of years. Since antiquity, natural stone has been an enduring symbol of wealth, stability, and sheer grandness.

Real Vermont Thinstone Veneer has been manufactured for many years. Nominal thickness is 1-1/4 inch. Outside corners are available in ALL types and styles of stone; allowing you to conceal the true thickness of the stone.

The reduced weight of the Vermont Thinstone Veneer helps to reduce production, shipping, and construction costs. In addition, Vermont Thinstone Veneer can be installed without footings or ledges and adheres to concrete, block walls, hardibacker, concrete-board and even metal lathe systems.
